

Claw Code System — Full Attention Report

Everything that needs your eyes, by company and department • Compiled 12 August 2026

How this report was compiled

Data pulled live from Mission Control (Base44): EM work items, group work items, the 58-item automation register, 39 AI requests, 121 tasks, 98 Plaud intake records, the article pipeline, company-run and inbound-doc queues, and runner heartbeats — plus the equity-blog GitHub repo and its open pull request. Where a department has nothing on its books, that is stated explicitly so you can set direction.

Executive summary — the five things that matter most

1. The Plaud intake pipeline is jammed. 91 transcripts are sitting Unrouted / sync-pending, everything captured since 5 August — including substantive meeting notes (News Desk migration, editorial workflow weekly meeting, Persimmon H1 analysis, defensive-positioning reasoning note, Mission Control system design). Routing stopped after the 4 August backfill. Nothing dictated in the last week has become a work item.

2. Eight approvals are waiting on you in the Mission Control approval inbox (social account review, claim letters, several purchases, one correspondence draft). They are listed per department below.

3. The 'Done → Resolved' watcher has been re-activated today. Your standing request to auto-move every note marked Done into 06_Tasks/Resolved/ was sitting in **Error** state; I have flipped its intent to *activate* so the REMOTEPC runner (online, heartbeat 10:23 today) re-dispatches it. Once it lands, the 12 currently-done task notes move automatically.

4. WP4 (EM article pipeline) is the flagship blocker. It needs one nominated article to walk the full dry run (inputs → draft → website-ready → MAP tick → graphics → gated send). Nobody can pick the article but you.

5. A large blocked-on-detail backlog. Roughly 20 automations and AI requests are stalled purely on missing details from you: dates, links, prompts, and a batch of Codex jobs held at 'Awaiting approval'. The consolidated question list is at the back — answer it in one block and the system can digest it.

System health at a glance

Item	Status	What's needed
REMOTEPC runner	Online	Heartbeat 10:23 today, vault OK, syncing normally.
MICKEYLAPTOP runner	Stale	Last seen 27 July — and it still claims the dispatch lock. Both machines currently show holds_lock=true, which contradicts the single-dispatcher rule. Worth clearing the laptop's lock.
Plaud intake	Backlogged	91 items Unrouted since 5 Aug. Needs a triage session or an auto-routing decision.
Website automations (ONS/RNS)	Running	ONS commits at 07:35/09:15/09:35 today; RNS feed + calendar index refreshed 10:22. No action needed.
Gmail triage email delivery	Open PR	Draft PR #4 (fix summary email delivery) open since 15 July. Needs test/merge decision.
Company run pipeline	Empty	CompanyRun and InboundDoc queues are both empty — no daily company runs are being created.
Article pipeline records	Stale	5 legacy articles (Broadcom, James Halstead, AO World, Boohoo, Persimmon) sit on old statuses; none migrated into the new gated workflow.

Equity & Markets Insight

Editorial

- **WP4 — EM article pipeline first (ACTIVE, high, T3).** The gated article workflow is built but unproven. It needs one nominated article to run end-to-end in dry-run: upload tear sheet + valuation → Claude draft → iterate → website-ready → MAP tickbox → graphics → gated Send-All. **Direction needed: nominate the company/article.**
- Recurring: financial-calendar check for next month fires five days before month-end (read-only). Active, no input needed.
- Legacy article records need a decision: Broadcom (verified), AO World (verified), James Halstead (long read), Persimmon (refined), Boohoo (published). Migrate into the new pipeline, or archive them?

Research Department

- **Burberry manufacturing evidence + infographic brief (ACTIVE, high).** UK-vs-China evidence with a source/claim ledger before publication. Pushed to Codex on your bulk request of 4 Aug — awaiting results review.
- **UK/US share-trading accounts on X (ACTIVE).** Competitor/benchmark research, also pushed via Codex 4 Aug.
- Watchlist review (EasyJet, IAG, Jet2, NatWest, Barclays, Paragon, Keller) marked **Done** after your confirmation. A 'Shares to purchase (checklist)' task remains open in 06_Tasks/Complex — close it if the review covered it.
- Recurring active: daily trading-opportunities check, weekly stop-loss review, monthly UK/US market assessment.
- **Blocked on prompts from you:** fortnightly FTSE 350 / Nasdaq sector-trend analysis, and the monthly commodity checks report (oil, gas, precious metals, currencies, gilts). Both just need the prompt drafted with you once.

Distribution / Social Media

- **Review EM Facebook, X and Instagram setup (QUEUED — approval requested).** Status/gaps/branding review; no posting without separate approval. **Approve to unblock.**
- AI request 'Structured social media image prompts' sits in the inbox — wants a reusable prompt library for image generation. Dispatch or park?

News Desk

- No work items on the board. RNS + ONS feeds run automatically and committed today. **But note:** the 7 Aug meeting transcript 'News Desk Migration, Gmail Triage...' is stuck in the unrouted Plaud backlog — whatever was agreed there never became tasks.

Design Department

- **Empty.** Its only item (4 Aug transcript about the Mission Control page redesign) was marked Done. Two EM_Web_Images requests are sitting Ready (Nasdaq-100 pullback cover set, GBP outlook cover set) — they will run when the watcher picks them up; check outputs land. **Direction welcome:** next design priorities (e.g. Burberry infographic once research returns).

Growth / Customer Acquisition

- **No active work items.** The Codex newsletter-growth research has an answer waiting in 'Awaiting approval' — read the output and either action its recommendations or close it. The 'Daily AI research and content ideas' routine is also awaiting your approval to become a daily habit. **Direction needed: is growth a priority this month?**

General Updates / Website queue (EM_Web_General)

- **In progress:** roll the new front-page design across analysis, valuation, trading log, RNS and Long Reads pages.
- **Ready for Claude:** functionality ideas for the analysis & valuation pages.
- **Inbox, undispatched:** mobile header/footer logo fix (since 9 July), BAT brand-logo strip, RNS related-coverage link changes, weekly sector-newsletter improvements. **Say which to dispatch.**

Group Mission Control & Venture Studio (Operations)

- **WP5 — recurring register & daily spawner (ACTIVE)**. 58 records loaded; the only remaining proof is running the **Fortnight Dry Run** button once in the app and recording the result. That's a two-minute job on your side.
- WP1 (schema), WP2 (SQLite engine), WP3 (bridge v2), WP4b (approval inbox), WP6 (heartbeat/treasury board) and WP7 (intake & division boards) are all **Done**.

Automation monitors — all waiting on wiring

Item	Status	What's needed
Gmail triage monitor	Waiting	Needs a non-secret status writeback from the Claude workflow (and PR #4 merged so summary emails actually deliver).
ShareScope prices + tickers	Waiting	Needs status writeback; separately, confirm the download job runs on the RemotePC only (open AI request 'ShareScope download system check').
CMC valuation spreadsheet watcher	Waiting	Watcher fix In progress; the 7–28 July backfill is queued to run on RemotePC. Also needs the spreadsheet link supplied for the weekly check task.
Plaud transcript pickup	Warning	Live runner bridge still rejects PlaudIntakeItem writes; backfill used direct records. Likely the root cause of the 91-item unrouted backlog.
Research Tree downloads	Blocked	Outlook folder → Dropbox design still needed before setup.
Company websites check	Waiting	Needs the final URLs for Malling Markwell, Botswana Mana, EM and Lactose Free.

Malling Markwell Ltd

Documentation

- **Claim letters for T1 Roofing and Bexleyheath (QUEUED — approval requested)**. Drafting is allowed now; sending needs your named approval. A duplicate open task also sits in 06_Tasks/Admin.

Administration

- **T1 Roofing mail delivery check (WAITING)** — needs clarification of what 'pointer link' referred to.
- **Rent checks (WAITING)**: Gary's rent needs an exact due date; the managed-properties list needs confirming (transcripts mention Bexleyheath, Scotland/Monkey Puzzle, later Snodland and Tunbridge Wells — which is final?).

Correspondence

- **Map & Spectre details message (WAITING — approval requested)** — the source fragment was unclear; confirm what should be sent, to whom.
- **Rent-due email reminder automation (BLOCKED)** — needs an approved email workflow and a recipient-data design before it can exist. Say if you want this designed.

Personal HQ

Food

- **Low-FODMAP two-week lunch & dinner plan (QUEUED, high)** — ready to produce; just needs activating.
- Food shopping (gluten-free flour, lactose-free cheese) and the fine chopping device purchase are queued with approvals requested — no money is spent without you.

Life Improvement

- **Letty's birthday present + card (high, approval requested).** Note: you pressed Done on its task on 5 Aug but the runner never applied the intent — it is still pending. **Confirm whether it's actually handled;** if intents aren't being applied, that's a runner bug worth chasing.
- Dad's birthday present ideas (QUEUED) — options will be prepared for review.

Administration

- Recurring reminders are active (bank statements, paperwork, portfolio checkup, screens, Deebot, etc.). **Blocked on details from you:** Amex and NatWest payment dates, CMC spreadsheet link, photo-backup cadence (weekly or monthly?), EcoVac refill day, O2 invoice route, monthly-PDF sources.
- Clarification queue: the one-line 'admin task, save' note from 4 Aug remains unactionable — expand or discard.

Fitness / Entertainment / Correspondence

- All routine (Mounjaro, measurements, pills; date nights, Facebook saved items; call Mum/Letty, spam-folder and chased-email checks). One blocker: 'next 12 months of events' lookup needs a prompt and preferred sources.

Lactose Free Life (LF)

This department is empty — highlighted for direction. No work items exist in any LF division. Two dormant threads: the 'Check prompt to update SIDM file' request is sitting at Ready (will run when the watcher collects it), and the daily Codex restaurant-directory prompt builder errored and needs re-dispatch if still wanted. **Next stage suggestion:** decide whether LF gets a content cadence (recipes / restaurant directory) this month, or is parked deliberately.

AI Requests (07_AI_Requests) — dispatch decisions

Errored requests

13 requests sit at **Error**. Most of the newsletter ones already contain completed outputs (header collage, macro summary, methodology removal, breakdown kept), as do several Mission Control UI ones (sort, filter, done button, next-stage box, food-shopping area) — they look like they finished but failed to close. **Decision: mark those Done, and re-dispatch the genuinely unfinished ones:** United Utilities FY2021 EPS null-fix (5620 glitch), wire-newsletter-to-COMMENTARY_BRIEF (RemotePC-only job), notification dismissal fix, and the lactose restaurant-directory prompt. The Done→Resolved watcher enhancement I already re-activated today.

Held at 'Awaiting approval' — flip to Ready when you want them to run

- Codex Long Read research, batches 1 (8 candidates) and 2 (10 candidates).
- Codex deep research: five UK retail/consumer names (31 Jul).
- Codex initial summaries, batches 2–5 (staples/healthcare, defence/miners, data/property/financials, US mega-caps/trusts) — held deliberately for headroom; there is headroom now.
- Newsletter-growth research (output ready — review it); daily AI research-ideas routine; batch-download runner task; user accounts & portfolio feature exploration.

In progress

- CMC statement watcher fix (root cause found; backfill execution pending on RemotePC).
- Front-page design rollout across the rest of the EM site.

Task list (06_Tasks) — hygiene

121 task records; ~109 open. There is heavy duplication from repeated transcript ingestion: 'Go to car wash' ×5, toothpaste ×4, shower gel ×4, 'Pay Emily £500' ×4, Amex/NatWest payoff duplicates, body measurements ×2, trade-show app ×3, France-trip packing items that are long past. **Decision: authorize a dedupe/archive pass** (keep newest of each duplicate, archive pre-August one-offs that are clearly done). The 12 tasks already marked done will be swept into 06_Tasks/Resolved automatically once the re-activated watcher lands.

'Done' notes → Resolved folder — status of your request

The vault files live on the RemotePC, so the move itself must be done by the runner, not from this session. The designed mechanism is the watcher enhancement 'auto-move status: Done tasks to 06_Tasks/Resolved/'. It had failed with Error; **I set its intent to activate at 10:30 today**, the REMOTEPC runner is online, and once it processes, every note flipped to Done gets moved automatically from then on — no per-note action needed. If the next runner pass doesn't pick it up, that confirms the intent-application bug flagged under Personal HQ.

Your consolidated question list

Answer these in one block and I can push the whole system forward:

#	Decision needed	Where it bites
1	Plaud backlog: bulk-route the 91 unrouted transcripts (I triage, you confirm), or fix the runner bridge first and let it auto-route?	Whole system intake
2	Approvals inbox — approve or reject: (a) EM social accounts review, (b) T1 Roofing/Bexleyheath claim letters, (c) Letty present, (d) food shopping items, (e) chopping device, (f) hats, (g) upholstery cleaner, (h) map/Spectre draft.	EM Distribution, Malling Markwell, Personal HQ
3	WP4: which company/article is the nominated dry-run article?	EM Editorial
4	WP5: run the Fortnight Dry Run button once in the app (or tell me to trigger it) so WP5 can close.	GMC Operations
5	Errored AI requests: OK to mark the finished-looking ones Done and re-dispatch UU EPS null-fix, newsletter wiring, notification fix, and the LF restaurant prompt?	AI request queue
6	Codex batches held at Awaiting approval (initial summaries 2–5, Long Reads 1–2, UK retail deep-research): flip which to Ready, and in what order?	EM Research
7	Task dedupe: authorize the cleanup pass described above?	06_Tasks
8	Letty present: actually bought? Your 5 Aug Done press was never applied — confirm state, and I'll chase the intent bug.	Personal HQ / runner
9	Missing details bundle: Amex + NatWest payment dates; CMC spreadsheet link; photo-backup cadence; EcoVac day; Gary's rent due date; final managed-property list; company website URLs.	PHQ Admin, MM Admin, GMC monitors
10	Prompts to draft with you: FTSE 350/Nasdaq sector trends; commodity checks; 12-months events lookup.	EM Research, PHQ Entertainment
11	PR #4 (Gmail triage email delivery fix): test and merge, or rework?	GMC Automations
12	Legacy articles (Broadcom, AO World, James Halstead, Persimmon): migrate into the new gated pipeline or archive?	EM Editorial
13	LF: park deliberately, or set a content cadence (recipes / restaurant directory)?	Lactose Free Life
14	MICKEYLAPTOP still holds a dispatch lock while offline since 27 July — OK to clear it so REMOTEPC is the sole dispatcher?	Runners

Reply with a block of answers in any order — numbered replies against this table are ideal — and the system will work through them.
